## ◆ Welding Products

# Advantages

- ◆ One end of the cable to the oscillation output control cable connector tube on the other end to the back of the box output control cable outlet and tighten.
- ◆ The welding head connection surface wipe, connected to the transducer oscillation tube, and lock with the wrench.
- ◆ Must be used when handling welding head to weld two wrench head and transducer were stuck, cannot be only one part of the card lock or handling, so as not to cause damage to the hand-held oscillation cylinder.
- ◆ Check the 1,2 point is properly installed, the power cord plugged into an external power socket outlet, and flip the power switch, then the power indicator light.
- ◆ A. Portable ultrasonic plastic welding machine has been debugged before leaving the factory, without exception, the power is turned on, adjust the welding time to the appropriate location can be used directly.
- ◆ B. Fault analysis: Failure phenomenon caused by reasons when the system is connected to the power, the power line short fuse blows when the power switch is turned on, the power light does not shine (1, power is not really connected; 2, rectifier bridge bad);  
C. The power switches lights or bad;  
D. The fuse is blown;
